- FREE CONFIGURATION SOFTWARE

➤ INTRODUCTION

The SEM1605P is the next generation DIN rail mounted temperature transmitter from Status Instruments. It has been designed to accept most common RTD temperature sensor inputs and provide the user with a standard two wire (4 to 20) mA output signal.

All temperature ranges are linear to temperature.

Designed for ease of use, our latest USB interface is fitted for quick and easy configuration. Just connect a standard USB cable between the SEM1605P and your PC. Our free configuration software will guide you through any changes you wish to make. To further help save time, the SEM1605P does not need to be wired to a power supply during the configuration process, it is powered via the USB interface from your PC.

➤ FEATURE HIGHLIGHTS

ACTIVE RANGE

The SEM1605P is provided with a user push button ranging option, allowing adjustments at both 4 mA and 20 mA for a live value.

The 'user adjust' function can be locked during configuration if not required. The state LED indicates out of range input during normal operation, during 'user adjust' it is also used to indicate the stage of adjustment.

(4 and 20) mA TRIM

The buttons can also be used for 4 mA and 20 mA current trim adjustment to add small offsets to (4 or 20) mA output.

SENSOR REFERENCING

The SEM1605P sensor referencing via the Windows based USBSpeedlink software allows for close matching to a known reference sensor eliminating possible sensor errors.

SENSOR BURN OUT DETECTION

If a sensor wire is broken or becomes disconnected the SEM1605P output will automatically go to its user defined level (upscale or downscale) or a pre-set value.

STABILITY

The SEM1605P DIN rail transmitter incorporates the latest digital technology to ensure accurate low drift performance.
